[NEW INSTALLATION INSTRUCTIONS]

For instructions on performing a new installation of EvolutionScript, rename the file **config.php.new** to **config.php** located in /includes folder, then go to:

<http://www.yoursite.com/install/install.php>

And follow the indications.

[POST INSTALLATION TASKS]

We suggest you to follow the next indications after complete the installation process:

1. Remove /install folder.
2. Change username, password and email of admin panel
3. Activate account protection of your admin panel (Home -> Account)
- 4. DO NOT FORGET TO CONFIGURE YOUR CRONJOBS**
5. Cronjob commands can be found in Setup -> Automation Settings, we suggest to use CURL instead of WGET as some servers don't support it.
